

*** Adding Framework In Project ***

Provided "Run Script" will trim **i386** & **x86_64** architectures from framework on archiving.

Run Script (Copy Below Text) :

```

FRAMEWORK="BhartiPay"
FRAMEWORK_EXECUTABLE_PATH="${BUILT_PRODUCTS_DIR}/${FRAMEWORKS_FOLDER_PATH}/${FRAMEWORK.framework}/${FRAMEWORK}"
EXTRACTED_ARCHS=()
for ARCH in $ARCHS
do
lipo -extract "$ARCH" "$FRAMEWORK_EXECUTABLE_PATH" -o
"$FRAMEWORK_EXECUTABLE_PATH-$ARCH"
EXTRACTED_ARCHS+=("$FRAMEWORK_EXECUTABLE_PATH-$ARCH")
done
lipo -o "$FRAMEWORK_EXECUTABLE_PATH-merged" -create "${EXTRACTED_ARCHS[@]}"
rm "${EXTRACTED_ARCHS[@]}"
rm "$FRAMEWORK_EXECUTABLE_PATH"
mv "$FRAMEWORK_EXECUTABLE_PATH-merged" "$FRAMEWORK_EXECUTABLE_PATH"
  
```

*** Implementation ***

1. Import framework in your file. Like: `import BhartiPay`
2. Create a `BPRequest` instance, which consists of transaction details/parameters in a try-catch block.
3. Then call below method to initiate transaction:
`BhartiPay.initiateTransaction(request: <BPRequest Instance>, delegate: <BhartiPayDelegate Conformance>, controller: <UIViewController instance on which Gateway Controller will be presented>).`
4. Implement `BhartiPayDelegate`'s methods to handle response & errors.

Note:-

1. While creating instance of `BPRequest` you can set `returnURL` as nil. In that case gateway's default `returnURL` will be tracked.
2. While creating instance of `BPRequest`, amount needs to be in the smallest unit. For eg: if currency is **INR** then set amount in **PAISA**. (For transaction of INR **3.00**, set `amount` parameter **300**)
3. Consider **GatewayDemo** project as sample reference.
